ACKNOWLEDGEMENTS

Under the general guidance of Ellen Naor, Director of the Division of Data and Research, Bureau of Health Planning and Development, this report was produced by Dale E. Welch, Senior Researcher. Deputy Division Director, William Perry, provided technical assistance and consultation in developing the statistical methodology. The cover was designed by Bruce Armstrong and the report was typed by Sue Whitley and Sylvia Cunningham.

# INTRODUCTION

These intercensal estimates are for the total population and five age groups in each minor civil division (MCD) in Maine, on July 1st of each year, 1971-1979. Organized MCD's are arranged in alphabetical sequence within each county, and summaries of each county are displayed as well. Some of the unorganized MCD's are clustered as a single unit of population. The clustered MCD's follow the organized minor civil divisions. The April 1 census counts for 1970 and 1980 also appear in the report.

The intercensal population estimates presented here supersede all previously issued estimates of the population of Maine for the years 1971-1979. The original postcensal population estimates were prepared and published during the year following the year of estimate. The original postcensal estimates were based on a combination of the 1970 census count, the natural increase, and the estimated net migration. Since one can make a more accurate estimate of migration when both the beginning and ending populations are known, the intercensal estimates are significantly more accurate than the earlier postcensal estimates. We recommend that the intercensal estimates in this document be used in all future analyses employing population counts for the years 1971-1979.

Further questions on the statistical procedures or on the estimates may be addressed to:

# TECHNICAL NOTES

## Methodology:

The method used to produce these intercensal estimates involved three stages of increasing refinement:

a) County estimates (total population),

b) Minor Civil Division (MCD) estimates (total population),

c) Minor Civil Division (MCD) estimates (five age groups).

These steps are described more fully as follows:

a) County estimates - Intercensal estimates of the population in each county for each year in the intercensal period were calculated as the sum of the 1970 Census count, the natural increase (births minus deaths) and the estimated net migration. The net migration was assumed to be constant for each year of the intercensal period. Net migration for the decade is the difference between the total population change and the natural increase; the estimated annual net migration is one-tenth of the total net migration.

b) Minor civil division estimates - Intercensal unadjusted estimates of the total population (all ages) in each MCD, for each year in the intercensal period, were calculated from the following formula[1/]:

$$_{i}P_{7t} = P_{70}\, e^{\left(\frac{t+.25}{10}\right) \ln \left(\frac{P_{80}}{P_{70}}\right)}$$

where:

$_{i}P$ = Intercensal population estimate for a specific population

$t$ = The units digit in the year of the intercensal estimate.

$P_{70}$ = Population of specific group in 1970 census.

$P_{80}$ = Population of specific group in 1980 census.

$e$ = 2.71828

$\ln$ = Natural logarithm

These unadjusted estimates were then adjusted by multiplying by a constant factor so that they would sum to the county total obtained in step (a).

c) Minor civil division estimates for specific age groups - The final step was the calculation of unadjusted intercensal estimates for each of five specific age groups in each MCD for each year of the intercensal period. The estimates were calculated from the same formula as used in step (b) for each of the following age groups:

Age Group Under 5

Age Group 5-17

Age Group 18-44

Age Group 45-64

Age Group 65 and over

These unadjusted estimates were then controlled to the previously produced (step(b))MCD intercensal population estimates of total population. It should be noted that the sum of the age groups may not equal to the total due to rounding.

Accuracy of Estimates:

For the first half of the intercensal period, these estimates may not be significantly more accurate then the original postcensal estimates. However, for the second half of the intercensal period, these estimates are without doubt significantly more accurate than the original postcensal estimates.
